

# Why a Biomimetic Crown Was Recommended

For your tooth

Your dentist has recommended a **biomimetic crown** for the reason(s) ticked below. This conserves as much of your healthy tooth as possible while restoring its strength.

## REASON(S) FOR THE RECOMMENDATION

- The tooth is weakened by a large filling
- The tooth has cracks or early fracture lines
- The tooth has significant wear or damage
- There is enough healthy tooth structure to preserve
- To reduce the risk of future problems
- A conservative, long-term solution is preferred
- To help avoid more invasive procedures if possible

## WHAT THIS MEANS FOR YOU

Less healthy tooth removed, a restoration designed to behave like a natural tooth, and a focus on long-term strength, comfort and durability.
